

H. BOKER & CO., INC • 101 DUANE STREET • NEW YORK

Since 1837 ... **H. BOKER & CO., Inc.**

... has been manufacturing and distributing quality Cutlery and Hardware products for the jobbing trade. With this background of knowledge and experience, we have developed an improved line of cutting pliers which is being presented for your consideration in this catalog.

BOKER Pliers are forged from a special analysis steel that experience has shown is best suited for tools of this type. There is nothing exclusive about this however, as every manufacturer has access to all the high grade steels that are available. The method of forging and heat-treating the steel determines the inherent quality of the plier. Anyone can look at a BOKER plier and see that it is well made. No one however, can tell by looking at a plier, how tough and durable it will be in actual service. That is what we mean by inherent quality.

To make sure that all BOKER Pliers have this inherent quality, we have installed the most modern heat-treating equipment it is possible to obtain, employing the new scientific principle of Hydryzing.

Hydrying minimizes danger of "CARBURIZATION" (that is what causes pliers to become brittle and results in breakage) and "DECARB" (that is what causes softness and results in the cutters nicking, the gripping jaws mashing and the handles bending). Hydrying also assures maximum uniformity.

As a further step to attain the acme of quality in BOKER Pliers, the latest induction heating equipment is used to give the cutting jaws that extra toughness, for easy cutting and maximum life.

To insure that no BOKER Pliers are shipped that are not absolutely perfect, every pair is Diamond Tested for hardness, and special load testing machines have been designed to test the strength of the handles and the cutting qualities of the jaws. As a final test, each pair must cut cleanly single strips of bond paper to prove that the jaws are in perfect alignment and that the cutters will snip stranded cotton covered lamp cord without fraying.

The BOKER name on a Plier, therefore, tells you that it has been heat-treated under the new Hydrying process and that it has passed the rigid tests described above. It guarantees that your customers will receive a tool of the highest quality—that will render better service—for a longer period.

Lasting favor is true evidence of Merit

BOKER — U. S. A. — PLIERS

No. 5612

HEAVY DUTY LINEMEN'S AND ELECTRICIANS' SIDE CUTTER

NUMBER	SIZE	WEIGHT PER DOZEN
5612	6 1/4 in.	4 lbs. 12 oz.
5612	7 1/2 in.	7 lbs. 12 oz.
5612	8 3/4 in.	11 lbs. 12 oz.

Scientific design giving proper balance plus the quality features described on following page, make this a tool you can recommend to the most exacting Mechanics with the assurance of complete satisfaction.

Burnished blued finish, fitted grip handles. Polished head. Milled sure-grip jaws. Hand-honed cutters which cut through the toughest wire with a minimum of effort. High carbon tempered steel bolt makes a perfect hinge and prevents cutting jaws from getting out of alignment.

No. 6612 — 7 1/2 inch — Same as 5612 — Highly polished chrome plated jaws and satin finish chrome plated handles.

PACKED IN INDIVIDUAL BOXES — 1/2 DOZEN IN A CARTON

No. 5336

LONG REACH FLAT NOSE OR DUCKBILL WITH SIDE CUTTER

NUMBER	SIZE	WEIGHT PER DOZEN
5336	6 in.	3 lbs. 14 oz.

Extra Long Wide Flat Nose makes this an especially useful Plier. This Plier is hardened and tempered, so that the jaw will not spring when pressure is applied.

This Tool is adaptable to switchboard work, telephone and telegraph, armature winding, etc. A very handy Tool for adjusting springs and for straightening needles on knitting machines. This Plier can be supplied with inside of jaws left smooth, if desired.

Burnished blued finish, fitted grip handles. Polished head. Milled sure-grip jaws. Hand honed perfectly aligned cutters.

No. 6336 — 6 inch — Same as 5336 — Highly polished chrome plated jaws and satin finish chrome plated handles.

PACKED IN INDIVIDUAL BOXES — 1/2 DOZEN IN A CARTON

No. 5382

LONG REACH CHAIN NOSE WIRING AND ASSEMBLY NEEDLE NOSE

NUMBER	SIZE	WEIGHT PER DOZEN
5382	7 1/2 in.	5 lbs. 6 oz.

Radio and telephone workers and airplane mechanics will appreciate this Tool. Loops and bends of all sizes can be made with it. The long, thin jaws of this Tool reach into places where fingers and ordinary pliers will not go, and when they reach, they grip and hold! Perfect tempering prevents them from breaking or taking a permanent set even under the strongest grips.

Burnished Blued Finish, fitted grip handles. Polished Head. No Cutter.

No. 6382 — 7 1/2 inch — Same as 5382 — Highly polished chrome plated jaws and satin finish chrome plated handles.

No. 5388

CURVED NEEDLE NOSE

NUMBER	SIZE	WEIGHT PER DOZEN
5388	6 in.	4 lbs.

ACTUAL SIZE
6 Inch

The long, thin nose of this Plier is bent at an angle which makes it very handy for working on machines where there are out of the way corners into which it is necessary to reach. Also handy for working around switchboards, terminals and telephones. The angle is arranged to give full clearance and prevent skinning of knuckles. The handles will stand the maximum amount of pressure without losing their shape or set, due to the special Hydryzing tempering process.

Burnished blued finish; fitted grip handles. Polished head. Milled sure-grip jaws.

No. 6388 — 6 inch — Same as 5388 — Highly polished chrome plated jaws and satin finish chrome plated handles.

MARKING TOOLS

For Every Permanent Marking Need

These examples of custom-built tools indicate the wide variety of sizes and shapes we are called upon to produce. While in many cases our customers specify complete details in the form of blueprints, others avail themselves of our engineering service and leave design to us. In either event the tool is made to function to the customer's entire satisfaction. No Marking Tools are too small or too large for us — likewise quantities of 1 to 10,000 pieces are welcome.

BOKER "NU-TYPE" HEAVY DUTY HAND CUT STEEL STAMPING LETTERS AND FIGURES

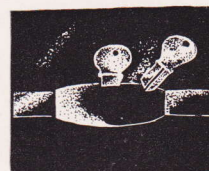

Made of Special Alloy Steel, scientifically heat-treated and with correctly formed heads and bevels, these stamps are out-performing any that have thus far been offered, and not a single accident resulting from their use has ever been reported.

These stamps have been used right along for stamping armor and plate tempered steel springs, thus demonstrating the fact that it is wholly unnecessary to buy special heavy stamps when Boker "Nu-Type" Heavy Duty Hand Cut Stamps will do the work.

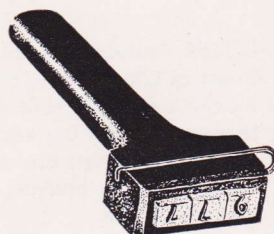

LOG HAMMERS — Standard log hammers are unexcelled in quality and can be furnished in any size and style desired. Characters are engraved very deep and give clean uniform impressions. All hammers are correctly balanced for proper swing and rhythm.

TYPE HOLDERS — One of the many styles of interchangeable type holders. The locking pin absolutely prevents type from falling out. Type back against a separately heat treated platen. Hand Type Holders and Type up to 1/4" characters are carried in stock. Ask for circular. All shank style holders made to order.

KEY COINING DIES — The common door key requires lettering for identification and design for beauty. Dies for these operations are directly in our field. Our engineers have spent much time in developing such important factors as engraving depth, bevels, letter face and backgrounds, resulting in most efficient and serviceable key coining dies.

HAMMER STAMP — A light inspection or trade-mark hammer head easily carried and always available.

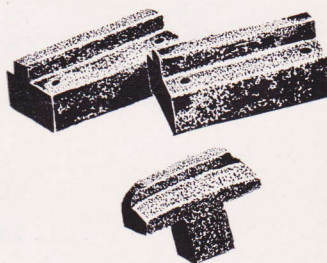

SPECIAL SHAPED BLANKS — built to customer specification. All require careful and accurate machining, which is part of our regular work. Blanks can be designed for embossing, printing or rolling operations.

HAND STAMPS — Stamps of this kind are recommended for the permanent marking of steel and other metals, wood, leather, fibre, etc. They serve for marking large cumbersome parts which cannot be marked by machine.

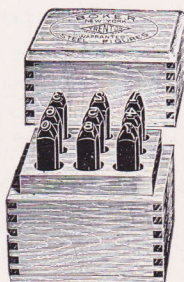

CUSTOM BUILT DIES — The two recesses accommodate inserts engraved with customer's private code marking. They are quickly interchangeable and perform a highly important duty.
